

BF000039 – ESD flat brush, black 130 mm

The ESD flat brush -soft- with a total length of 250 mm is specifically designed for cleaning ESD-sensitive flat assemblies. The handle made of electrostatically conductive plastic and the bristle combination of natural bristles and conductive fibers ensure effective and safe cleaning. The bristle length is 32 mm and the brush width is 10 mm, while the handle has a length of 120 mm.

The brush meets the requirements of the DIN EN 61340-5-1 standard for electrostatic discharge (ESD) and offers a resistance to ground between 10^6 and $10^7 \Omega$. These features make it an indispensable tool for tasks where avoiding electrostatic discharge is critical. The black bristles of the brush are soft, which allows for gentle cleaning while maintaining conductivity.

TECHNICAL SPECIFICATIONS

Hardness: soft

Width: 130 mm

Bristles: natural bristles / conductive fibers

Bristle color: black

Brush length: 32 mm

Brush width: 10 mm

Handle length: 120 mm

Length: 250 mm

Bleeder resistance: $10^6 - 10^7 \Omega$

ESD: yes
